

COMPANY PROFILE

VP Tradelink — Feed Ingredients, Industrial Minerals & Agricultural Commodities

An export house sourcing from multiple manufacturers across Gujarat and Rajasthan, India — matched to buyer specification, shipped FOB / CIF via Mundra & Kandla.

WHO WE ARE

V P Tradelink

VP Tradelink is an export house based in Rajkot, Gujarat, India, established in 2019. We source feed ingredients, industrial minerals and agricultural commodities from producing regions across Gujarat and Rajasthan, and arrange documentation and container loading for FOB and CIF shipment through Mundra and Kandla ports.

We are neither a single-factory manufacturer nor a generalist trading intermediary. Our model is built specifically around matching a buyer's exact specification to the right source — by working across multiple manufacturers, mines and processing units for the same product, rather than reselling whatever one factory happens to produce.

ESTABLISHED	HEADQUARTERS	BRANCH OFFICE	REGISTRATION
2019 Rajkot & Gandhidham	Rajkot, Gujarat, India	Gandhidham, Gujarat, India	IEC Registered (India Import-Export Code)
PORTS	INCOTERMS	PAYMENT TERMS	INSPECTION
Mundra / Kandla	FOB, CIF (EXW, CFR, DDP available on request)	LC / TT / CAD — confirmed per order	Third-Party Inspection Available

Certificate of Analysis (COA), Certificate of Origin and Phytosanitary documentation are prepared per shipment for every product.

WHY VP TRADELINK

Not a Manufacturer. Not a Conventional Trader.

Buyers sourcing from India typically choose between two options, and each has a structural limitation:

A MANUFACTURER	A CONVENTIONAL TRADER	VP TRADELINK
Knows its own product deeply, but produces to one factory's fixed specification, capacity and grade range. If a buyer's requirement falls outside that single output, the manufacturer cannot flex to meet it.	May list many products across categories, but typically does not work across the full range of specifications and sources available for the same product — offering whatever happens to be available in the market rather than the best-matched source.	Works with multiple origins and manufacturers for the same product, giving a broader working knowledge of available specifications, grades and sourcing options — so the buyer's requirement is matched to the right source, not simply to what is on hand.

This is the practical difference in day-to-day sourcing: because we are not committed to one factory's output, we can compare specification, price and lead time across several qualified suppliers for the same product before confirming an order — and because we are not a generalist reseller, we stay close enough to each origin to verify quality, packaging and documentation ourselves rather than passing that risk to the buyer.

How We Source & Expand Supply

Our sourcing network is built region by region, not product by product:

Multiple manufacturers per product. For each product we carry, we maintain relationships with more than one producing unit or mine — so that grade, capacity, or price movement at one source does not interrupt supply. If one supplier is out of a specific grade or fully booked, we move the order to another qualified source without the buyer needing to re-negotiate from scratch.

Specification-matching across sources. Different manufacturers of the same commodity often run to slightly different natural specification ranges (for example, Al2O3 content in China Clay, or K2O in Potash Feldspar). We track these differences across our supplier base so that when a buyer names a target specification, we can identify which source actually produces it — rather than offering a single standard grade and asking the buyer to accept it.

Continuous supplier qualification. New sourcing relationships are evaluated against consistency of specification, documentation practice, and reliability on committed loading dates before they are added to our supply base — expanding what we can offer without expanding the risk to a shipment.

Origin-led, not desk-led. Being based in Rajkot and Gandhidham keeps us physically close to the mining, crushing and processing belts of Gujarat and Rajasthan, so sourcing decisions are made with direct knowledge of a unit's output and reliability, not from a price list alone.

HOW WE WORK

Built Around the Buyer's Requirement

1

Source

Origin-led. We work close to producing regions and established supply networks across Gujarat and Rajasthan, drawing on multiple qualified manufacturers for each product.

2

Verify

Specification first. Product, quality, quantity and documentation are aligned against the buyer's stated requirement before any shipment is confirmed.

3

Coordinate

One commercial point. We coordinate sourcing, communication and export execution around the order — the buyer deals with the same two people throughout, not a rotating desk.

4

Deliver

Practical execution. Documentation, container loading and port handling at Mundra / Kandla are arranged directly, aiming for a clear transaction with fewer surprises between origin and destination.

Payment & Quality Assurance

Payment terms. We work on Letter of Credit (LC), Telegraphic Transfer (TT), or Cash Against Documents (CAD), and agree the specific structure with each buyer before confirming an order — for example, an advance against TT, or documents released through a bank under CAD. Buyers with a required payment structure are encouraged to raise it early so we can confirm fit.

Quality & inspection. Every shipment ships against an agreed specification and a Certificate of Analysis. Third-party inspection (SGS, Intertek, or an agency of the buyer's choice) can be arranged at the buyer's cost before loading, so the buyer holds an independent result — not only ours — before the container leaves port. If a shipment does not match the agreed COA, that discrepancy is handled directly against the inspection report; buyers are asked to raise it as soon as it is identified, while the shipment is still traceable.

Who you're speaking to. Every inquiry is handled directly by Vishal (calls and WhatsApp) and Shezad (email) — not a call centre, and not a rotating account manager. Buyers deal with the same two people from first inquiry through to shipment.

PRODUCT PORTFOLIO

12 Products Across 3 Categories

Full technical specifications, available grades and packaging options for every product below are provided in our separate Product Catalogue and individual Technical Data Sheets, available on request or alongside this profile.

01 Feed Ingredients

Rapeseed Extraction Meal	Oilseed Extraction Meal
Soybean Meal	Oilseed Extraction Meal
Guar Churi	Guar Gum By-Product

02 Industrial Minerals

Quartz	Industrial Mineral
Potash Feldspar	Industrial Mineral
Soda Feldspar	Industrial Mineral
China Clay (Kaolin)	Industrial Mineral
Bentonite	Industrial Mineral

03 Agricultural Commodities

Sesame Seeds	Oilseed
Cumin Seeds	Spice Seed
Psyllium Husk	Seed Husk Fibre
Groundnuts	Oilseed / Kernel

Industries Served

Animal Feed · Food Processing · Glass Manufacturing · Ceramics · Pharmaceutical · Oil Extraction · Foundry · Paints & Coatings · Paper · Rubber & Plastics · Drilling & Oilfield Services · Nutraceutical

GET IN TOUCH**Request a Quotation**

Tell us the product, specification and destination port, and we will confirm sourcing options, indicative pricing and lead time. A Product Catalogue with full technical specifications for all 12 products is available alongside this profile, and individual Technical Data Sheets can be sent for any product on request.
