Specifications by Form

PARAMETER	LUMPS	POWDER

Al₂O₃	18% — 20%	18% — 20%

Values shown are commercial ranges. K₂O content distinguishes this from Soda Feldspar and is the number ceramics and glaze formulators check first, since it directly affects firing temperature and the glassy phase a glaze develops. If you're unsure which of the two feldspars your formulation calls for, tell us the target firing range and we can recommend accordingly.
